Approvals: UL 508 / CSA C22-2 n. 14

Safety Limit Switches with separate actuator - Description

Applications

Easy to use, the limit switches with small latch (key) offer specific qualities:

- Capability for strong current switching (conventional thermal current 10 A).
- Opening guaranteed of the "N.C." contact(s) when the small latch is withdrawn from the limit switch.
- Contact blocks with dependent action and positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operation positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for monitoring and protection of industrial machines without inertia in which downtime is less than access time to the dangerous area. Use on sliding or pivoting protectors (covers, cases, doors, grids, etc.).

- They contribute to protection of operators working on dangerous machines, by opening the control circuit. Withdrawal of the small latch (key) by opening the mobile protector causes immediate stopping of the machine drive.
- They comply with the requirements of European Directives (Low Voltage and Machines Directive) and are conform to European and international standards.

Description

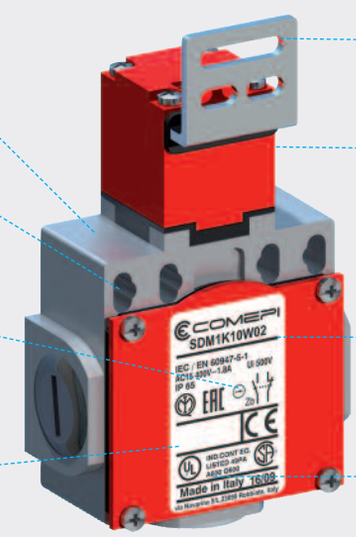
Safety limit switches with small latch (key) of SP/SDP/SBP/SFP series are made of fibre-glass reinforced UL-V0 thermoplastic material, and they offer double insulation ⧈ and a degree of protection IP65. Safety limit switches of SM/SDM series are made of zinc alloy (zamack) and have a degree of protection IP66. Safety limit switches SBM/SCM are realized in aluminium material and have a degree of protection IP66.
All models are equipped with 1NO+1NC, 2NC, 1NO+2NC, 2NO+1NC or 3NC contact blocks with positive opening operation of the "N.C." contact(s).

Casing
- SP/SM with standardized dimensions acc. to EN 50047
- SBP/SBM width with standardized dimensions acc. to EN 50041

Mounting the casing
- 2 x M4 screws on top part for SP/SM series
- 2 or 4 x M4 screws on top part for SBP/SDM series
- 2 or 4 x M5 screws for SBP/SBM series
- 2 x M5 screws on top part for SFP/SCM series

Contact Block:
- Positive opening operation
- Snap action or slow action
- Contacts are electrically separated

Connecting terminals:
- Block of 2 contacts: M3.5 (+, –) pozidriv 2 screw
- Block of 3 contacts: M3 (+, –) screw
- Screw head with captive cable clamp
- Markings conform with IEC 60947-1, IEC 60947-5-1 standard



A variety of operating inox keys:
- Flat / Bent
- Shock absorbing
- Adjustable

Operating head
- Fully turnable head is available for SP/SDP/SM/SDM series

Cover:
- 1 screw for SP/SDP series
- 2 screws for SFP/SBM series
- 3 screws for SM series
- 4 screws for SDM/SCM series

Electrical connection:
- 1 x cable gland for SP/SM/SBP/SBM series
- 2 x cable gland for SDP series
- 3 x cable gland for SFP/SDM/SCM series

Symbols

Example:	SD	M	1	K	10	X	1	1
Structure:				K				

Casing width:
S = 30 mm width + 1 cable inlet
SB = 40 mm width + 1 cable inlet
SC = 60 mm width + 3 cable inlets
SD = 50 mm width + 2 cable inlets (SDP series) or 3 cable inlets (SDM series)
SF = 50 mm width + 3 cable inlets

P: Plastic casing - **M:** Metal (SM, SDM) / Aluminium (SBM, SCM) casing

Electrical connection
1: cable inlets for PG13.5 cable gland
2: cable inlets for 1/2 NPT cable gland *
3: cable inlets for PG11 cable gland **
4: cable inlets for M16 x 1,5 cable gland **
5: cable inlets for M20 x 1,5 cable gland

Key operated version

Operating heads: codes 10-80-3000-4000-5000

Contact block

11: 1 NO + 1 NC contacts
02: 2 NC contacts
12P: 1 NO + 2 NC contacts
21P: 2 NO + 1 NC contacts
03P: 3 NC contacts

Only for SBM, SCM, SBP series:
12: 1 NO + 2NC contacts
21: 2 NO + 1 NC contacts
03: 3 NC contacts

Z: Snap action
W: Slow action (contact dependent)
X: Slow action non-overlapping late make
Y: Slow action overlapping early make

* In SP... and SDP... series, the 1/2" NPT thread is obtained by the use of a plastic adapter (delivered not mounted).

** Available only for SP/SDP/SM/SDM Series

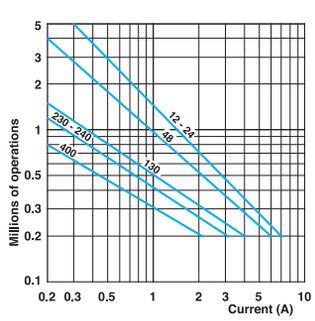
Safety Limit Switches with separate actuator - Technical Data

			SP / SBP / SDP / SFP Series	SM / SBM / SCM / SDM Series
Standards			IEC 60947-5-1, EN 60947-5-1 UNI EN ISO 14119	
Certifications - Approvals			UL - CSA - IMQ - EAC - CCC	
Air temperature near the device				
– during operation		°C	– 25 ... + 70	
– for storage		°C	– 30 ... + 80	
Mounting positions			All positions are authorised	
Protection against electrical shocks (acc. to IEC 61140)			Class II	Class I
Degree of protection (according to IEC 60529 and EN 60529)			IP 65	IP 66

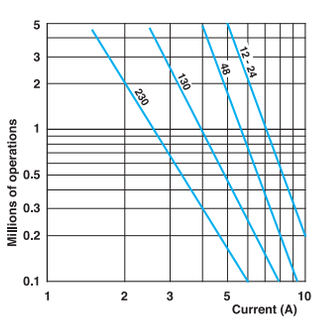
Electrical Data

Rated insulation voltage U_i - according to IEC 60947-1 and EN 60947-1 - according to UL 508 and CSA C22-2 n° 14			500 V (degree of pollution 3) (400 V for contacts type Z02, X12P, X21P, W03P) A 600, Q 600 (A 300, Q 300 for SM/SDM series and contacts type X12P, X21P, W03P)
Rated impulse withstand voltage U_{imp} (according to IEC 60947-1 and EN 60947-1)		kV	6
Conventional free air thermal current I_{th} (according to IEC 60947-5-1) $\theta < 40$ °C		A	10
Short-circuit protection U_e < 500 V a.c. - gG (gl) type fuses		A	10
Rated operational current			
I_e / AC-15 (according to IEC 60947-5-1)	24 V - 50/60 Hz	A	10
	120 V - 50/60 Hz	A	6
	400 V - 50/60 Hz	A	4 (1.8A for contacts type X12, X21, W03)
I_e / DC-13 (according to IEC 60947-5-1)	24 V - d.c.	A	6 (2.8A for contacts type X12, X21, W03)
	125 V - d.c.	A	0.55
	250 V - d.c.	A	0.4 (0.27A for contacts type X12, X21, W03)
Switching frequency		Cycles/h	3600
Load factor			0.5
Resistance between contacts		mΩ	25
Connecting terminals			M3.5 (+, –) pozidriv 2 screw with cable clamp (M3 for 3 poles contacts type)
Terminal for protective conductor			– / M3.5 (+, –) pozidriv 2 screw with cable clamp
Connecting capacity		1 or 2 x mm²	0.75 ... 2.5 (0.34... 1.5 for 3 poles contacts type)
Terminal marking			According to IEC 60947-5-1
Mechanical durability			1 million of operations
Electrical durability (according to IEC 60947-5-1)			Utilization categories AC-15 and DC-13 (Load factor of 0.5 according to curves below)
B10d = 2.000.000 cycles			

AC-15 - Snap action



AC-15 - Slow action



DC-13		Snap action	Slow action
		Power breaking for a durability of 5 million operating cycles	
Voltage	24 V	9.5 W	12 W
Voltage	48 V	6.8 W	9 W
Voltage	110 V	3.6 W	6 W

Safety Limit Switches with separate actuator - Technical Data

Technical data approved by IMQ

Standards		Devices conform with international IEC 60947-5-1 and European EN 60947-5-1 standards
Degree of protection		IP 65 (SP/SDP/SBP series), IP 66 (SM/SDM/SBM/SCM series)
Rated insulation voltage U_i		500 V (degree of pollution 3) (400 V for contacts type Z02, X12P, X21P, W03P)
Rated impulse withstand voltage U_{imp}		6 kV
Conventional free air thermal current I_{th}		10 A
Short-circuit protection - gG (gl) type fuses		10 A
Rated operational current		
I_e / AC-15	24 V - 50/60 Hz	10 A
	400 V - 50/60 Hz	4 A (1.8A for contacts type X12, X21, W03)
I_e / DC-13	24 V - d.c.	6 A (2.8A for contacts type X12, X21, W03)
	125 V - d.c.	0,55 A
	250 V - d.c.	0.4 A (0.27A for contacts type X12, X21, W03)

Technical data approved by UL

Standards	Devices conform with UL 508
Contact blocks type Z11, X11, Y11, W02 and Z02	
Utilization categories	A600, Q600 (A300, Q300 when installed in SM/SDM series)
Contact blocks type X12, X21, W03	
Utilization categories	A600, Q600
Contact blocks type X12P, X21P and W03P	
Utilization categories	A300, Q300

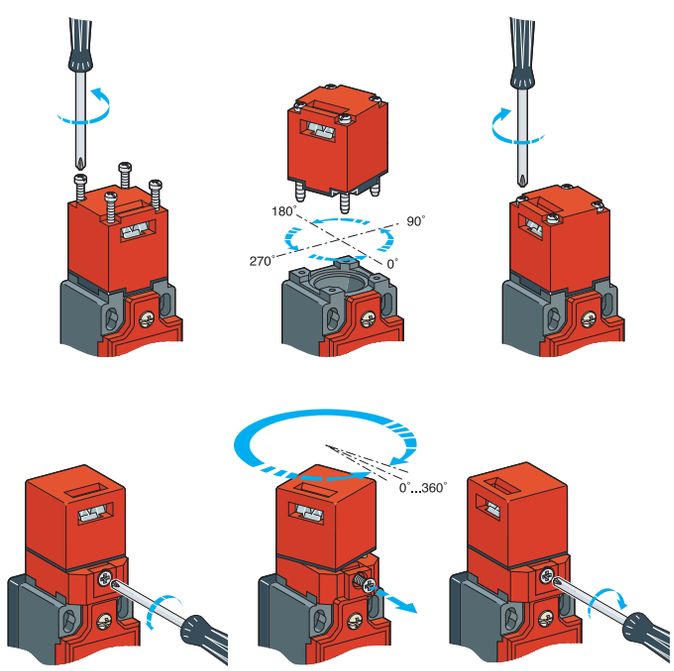
Use 60/75°C copper (Cu) conductor only. Wire rages 14-18 AWG stranded or solid. The terminal tightening torque of 7 lbs-in / 0.78 Nm. Suitable for conduit connection only with use of adapter sleeve optionally provided or recommended by the manufacturer.

For the complete list of approved products, contact our technical department

Implementation

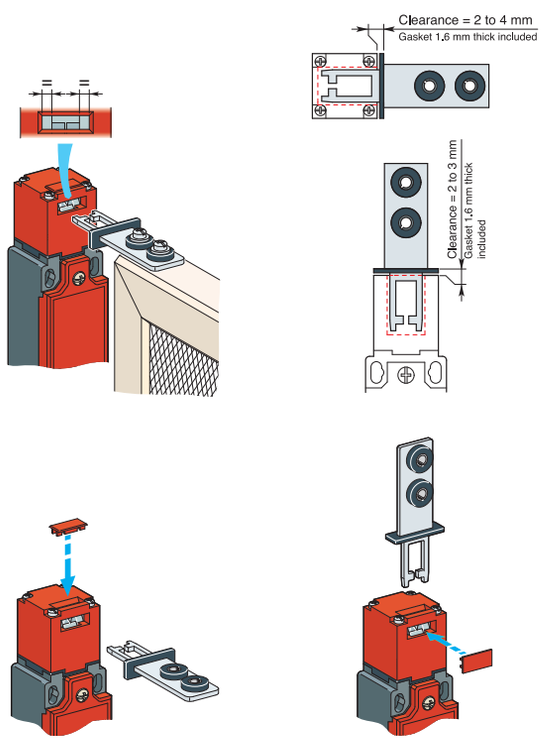
Operating head orientation

The head can be rotated each 90°.
Recommended tightening torque 0,5 Nm (max 0,8 Nm).



Recommended tightening torque 0,3 Nm (max 0,5 Nm).

Key adjustment

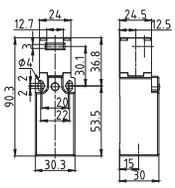


Polymeric casing - IP65

Electrical connection:
Replace the symbol "•" with the number of the thread desired
1: Cable gland PG 13.5
2: Cable gland 1/2" NPT (with adapter)
3: Cable gland PG 11
4: Cable gland M16 x 1,5
5: Cable gland M20 x 1,5

Operating keys to be ordered separately (see page 11)

K10 Adjustable head 90° (replaces K20)



Min. actuating force	**15 N (30N ⊖)**
Weight	**80 g**

Electromagnetic safety devices with separate actuator - Description

Applications

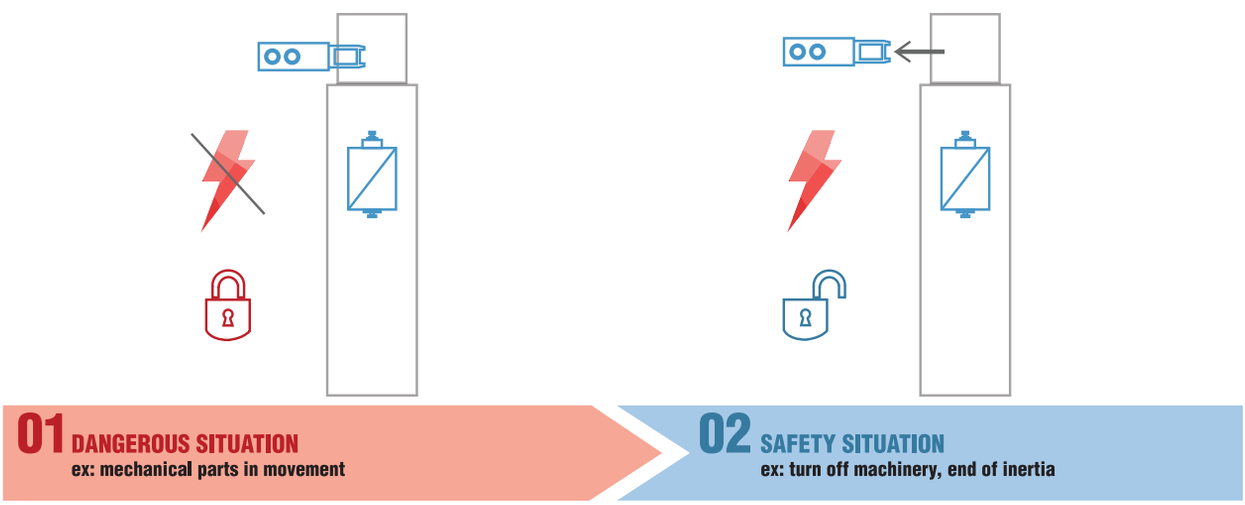
This device is useful for guarantee the safety of the operator in case of machines where the hazardous conditions remains for a while time after the generation of the stop signal, because of the mechanical inertia of moving parts, components under pressure or with high temperatures. This device, when used individually, is not suitable for applications in machines where the operator can enter inside the protected area with his whole body, because of the possibility of accidental closing of the protection fences after the operator entry. In order to test the proper operations, verify the correct insertion of the actuator in the operating head and start the machine by closing the protection. In this conditions must be impossible to open the protection. With the machine stopped and disconnected protection, must be impossible to start the machine.

Safety warnings

Safety switches perform a human protection function. The wrong installation can cause serious danger situations, as well as the manumission of the device and of the entire safety system. The device must never be evaded or manumitted in every way. To prevent easy tampering, we recommend to install the device in a place difficult to access by unauthorized personnel, by using physical impediments or tricks to make any tampering more difficult.

M **MECHANICAL interlock**

- Actuator locked when the solenoid is not activated.
- Retention force at locked actuator 1200N.
- The release is possible by supplying the device.



E **ELECTRICAL interlock**

- Actuator locked when the solenoid is activated.
- Retention force at locked actuator 1200N.
- The release is possible by switching off the power supply.
- ATTENTION! in case of lack of voltage, the device allows immediate access to the protected area.

Safety hinges - Description

Applications

Within the range of safety devices, Comepi has created a new hinge with multiple integrated circuit which can suit all applications where high security is combined with a modern and sophisticate design. Thanks to its small sizes and numerous mounting options and connection (cable/connectors), the device is easily installed on most common aluminium profiles (minimum width 30 mm.). Its installation is also facilitated by the integration of a safety switch integrated into a single body, thus avoiding the need to separately install a mechanical hinge and a safety switch connected via a special pin.
The use of stainless steel components and the degree of protection IP67 permit the hinge to be subjected to frequent washing and to be used in environments where cleanliness and hygiene require maximum attention. The Comepi hinge was developed and manufactured according to the rules set out in IEC international publications and to applicable EN European Standards; the use of a redundant system and a proper configuration allows to obtain a safety system of machinery up to SIL 3 or PLe according to EN ISO 13849-1.

Description

Both the self-extinguishing body of the hinge and the rotation pin are made of technopolymer with high-rigidity capable of resisting to solvents, oils, greases and various chemical agents. The internal switch is composed of 4 slow action double break contacts. The positive opening (according to IEC EN 60947-5-1) is guaranteed on all NC contacts. All the circuits have a low contact resistance thanks to the self-cleaning action of the silver pastes.
Each hinge is supplied with the following kit:
- n°4 technopolymer covers (to avoid free access to screws):
- n°4 technopolymer bushings (for hexagon socket or nut M6).
- n°2 thermoplastic elastomer safety plugs to guarantee IP67 protection degree.

Casing
• Made of self-extinguishing technopolimer

Mounting the casing
• 4 x M6 screws UNI 5933 ISO 10642 countersunk-head screws
• 4 x cylindrical head screws with hexagon socket M6 UNI 5931 ISO 4762
• 4 x M6 UNI 5588 ISO 4032 nut

Screws and nuts are not supplied

Electrical connection:
• Cable 8x0,34 mm² PVC cable standard lenghts: 2m and 5m
• M12 connector

Contact Block:
• Positive opening operation
• 2NO+2NC or 1NO+3NC slow action contacts
• Contacts are electrically separated

Totally sealed for IP 67 protection degree

Symbols

Example:	S	P	H	1	X22C	020	U	A
Structure:	S	P	H	1				

Contact block
X22C: Slow action non-overlapping late make 2 NO + 2 NC contacts
X13C: Slow action non-overlapping late make 1 NO + 3 NC contacts

Type of connection
020: 2m UL PVC cable
050: 5m UL PVC cable
Null: Integrated M12 connector

Output
A: top axial
B: back
C: bottom axial

Standard executions
U: 8x0,34 mm² PVC cable
M: 8 poles M12 connector

Other versions of cable and electrical contacts are available on request: contact our sales department.

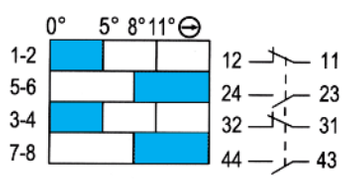
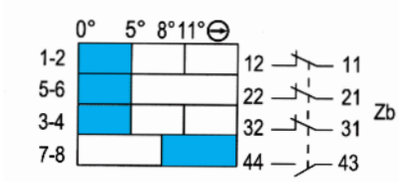
	125 V - d.c.	A	0.4
	250 V - d.c.	A	0.3
Switching frequency		Cycles/h	1200
Mechanical durability			1 million of operations
B10d = 2.000.000 operations			

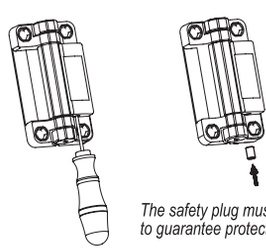
Operating diagrams

X22C



X13C





The safety plug must be fit (not removable) to guarantee protection class IP67.

As shown in the travel diagrams, the angle of action is set at the factory to 5° (opening of the NC contacts, to be verified according to EN294).
This angle and consequently also angles relating to the closure of the NO contact and positive opening of the NC contacts can be adjusted by the installer; in the case of doors of considerable size, the operating angle can be reduced up to 1° operating with a screwdriver on the adjustment screw. The degree of protection IP67 is then secured by inserting the appropriate safety plug (not removable) in the adjustment hole.
It is recommended to verify the correct operation of the device before starting up the machine and we suggest to repeat the test periodically.

Special executions on request

- Operating angle of the hinge other than from 0° to 180°, every 15°, where the system frame/door requires a special execution.
- NC and NO contact blocks setting (up to 4 NC).
- NO and NC ovelapping contacts.

Safety hinges - Technical Data

Technical data approved by IMQ

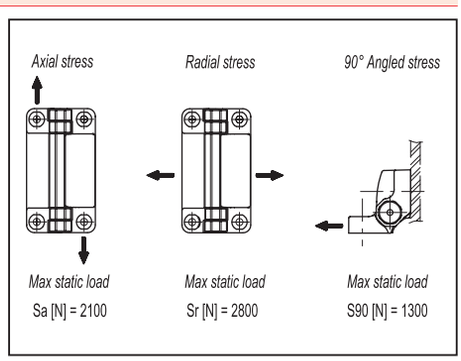
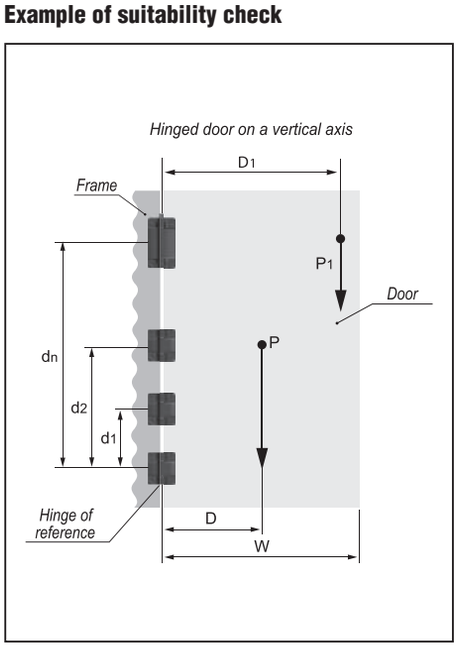
Implementation

Determination of maximum applicable load

For SPH1 hinges with built-in safety multiple switch, the reference value supplied is the max limit static load (Sa, Sr, S90), since these hinges can be used as safety devices.
Above this value, the material may break, thus prejudicing the hinge functionality. Obviously a suitable factor, according to the importance and safety level of the specific application, must be applied to this value. The load values shown in the tables of the different hinges are the result of tests carried out in our laboratories under controlled temperature and humidity (23°C-50% R.H.), under given conditions of use and for a limited period of time.



Example of suitability check



P weight of the door [N]
P1 additional extra load [N]
W width of the door
D distance [metres] between the centre of gravity of the door and the hinge axis. In normal conditions D = W/2
D1 distance [metres] between the hinge axis and the additional extra load application point
N number of hinges
k safety factor
dT sum of the distances [metres] of all the hinges from the hinge of reference (d = d + d + ... + dn). In case of only two hinge assembled, d is simply the distance between them

Conditions to be checked in order to ensure a correct functioning with two or more hinges

$$\frac{(P+P1)}{N} \cdot k < Sa$$

$$\frac{[(P \cdot D)+(P1 \cdot D1)]}{d_T} \cdot k < Sr$$

$$\frac{[(P \cdot D)+(P1 \cdot D1)]}{d_T} \cdot k < S90$$

The technical designer must use suitable safety factors (k) according to the type of application and function of the SPH1 hinge.

P = 294 N (30 Kg) D = 0,4 m N = 3
d_T = 1,5 m d_2 = 1 m d_1 = 0,5 m
P_1 = 196 N (20 Kg) D_1 = 1,2 m

$$\frac{490}{3} = 163 \cdot k < 2100$$

$$\frac{[(294 \cdot 0,4)+(196 \cdot 1,2)]}{1,5} = 235,2 \cdot k < 2800$$

$$\frac{[(294 \cdot 0,4)+(196 \cdot 1,2)]}{1,5} = 235,2 \cdot k < 1300$$

The examples shown here must be considered only as explanatory, since they are not applicable to all the different applications, conditions of use, ways of assembly which can actually take place.
In practice, the technical designer, after applying a suitable safety factor (k) must also test the chosen product to check its suitability.

Hinge mount Safety Limit Switches - Description

Applications

Easy to use, the limit switches with rotative axis or lever offer specific qualities:

- Capability for strong current switching (conventional thermal current 10 A).
- Opening of the "N.C." contact(s) for a very small rotation angle: 12°.
- Contact blocks with dependent action and positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for monitoring and protection of light industrial machines without inertia equipped with angular movement protectors (doors, hinged grids, rotative covers or cases, etc.). Detection by the rotative axis or by means of a lever.

- Opening of the mobile protector guarantees operator protection by immediately stopping the machine drive.
- These switches are suitable for conformity of the existing installed machine base, as they can be mounted on protection devices already installed.
- They comply with the requirements of European Directives (Low Voltage and Machines Directive) and are conform to European and international standards.

Description

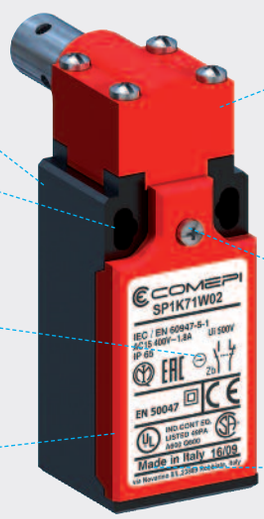
Safety limit switches of SP/SDP series are made of fibre-glass reinforced UL-V0 thermoplastic material, and the offer double insulation ⧈ and a degree of protection IP65. Safety limit switches of SM/SDM series are made of zinc alloy (zamack) and have a degree of protection IP66. They are equipped with 1NO+1NC, 2NC, 1NO+2NC, 2NO+1NC or 3NC contact blocks with positive opening operation of the "N.C." contact(s).

Casing
- 30 mm. width with standardized dimensions acc. to EN 50047
- 50 mm. width with standardized dimensions

Mounting the casing
- 2 x M4 screws on top part for 30 mm. width
- 2 or 4 x M4 screws on top part for 50 mm. width

Contact Block:
- Positive opening operation
- Snap action or slow action
- Contacts are electrically separated

Connecting terminals:
- Block of 2 contacts: M3.5 (+, –) pozidriv 2 screw
- Block of 3 contacts: M3 (+, –) screw
- Screw head with captive cable clamp
- Markings conform with IEC 60947-1, IEC 60947-5-1 standard



A variety of operating heads:
- Zinc plated steel shaft
- Stainless steel shaft
- Zinc plated steel lever

Cover:
- 1 or 3 screws for 30 mm. casing
- 1 or 4 screws for 50 mm. casing

Electrical connection:
- 1 x cable gland for SP and SM series
- 2 x cable gland for SDP series
- 3 x cable gland for SDM series

Symbols

Example:	S	P	1	K	71	X	1	1
Structure:				K				

Casing width:
S = 30 mm width + 1 cable inlet
SD = 50 mm width + 2 cable inlets (SDP series) or 3 cable inlets (SDM series)

P: Plastic casing M: Metal casing

Electrical connection
1: cable inlets for PG13.5 cable gland
2: cable inlets for 1/2 NPT cable gland *
3: cable inlets for PG11 cable gland
4: cable inlets for M16 x 1,5 cable gland
5: cable inlets for M20 x 1,5 cable gland

Operating heads: codes 71-72-61

Safety Magnetic Sensors - Description

Applications

Comepi offers a range of safety magnetic sensors SMP series designed to satisfy applications requiring high safety standards. Combined with an appropriate safety module, SMP magnetic sensors guarantee a safety system with Safety Integraty Level (SIL CL) up to SIL 3 (according to EN 62061) and Performance Level up to PLe (according to EN ISO 13849-1).

- Sealed: immune to dirt
- Wide actuation zone
- Difficult to by-pass as they can be easily hidden (with non-magnetic material)
- Electrical output contacts: 2NC, 1NO + 1NC or 1NO + 2NC
- Optionally provided with LED indicator
- Intervention from all directions

They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European and international standards.

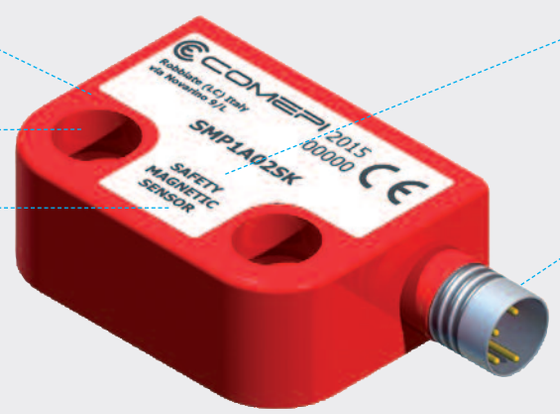
Description

The housing is made of technopolymer and it offers a degree of protection IP67. Integrated cable or M8 / M12 connection allow to install these devices in the most varied applications.

Housing
- 36 mm. width
- 88 mm. width

Housing fixing
- 2 x M4 screws

Output contacts:
- 2NC, 1NO + 2NC, 1NO + 1NC contacts



LED indicator
- Optionally provided on all models

Electrical connection:
- PVC cable
- M8 integrated connector (only for 2NC and 1NO + 1NC contacts)
- PVC cable + M12 connector

Safety modules

Applications

Safety devices MS series are modules for emergency stop which have been developed for safety applications up to SIL 3 (EN 62061) and up to PLe (EN ISO 13849-1). They are suitable for the control of limit switches for safety gates and of safety magnetic sensors.

- 1 or 2 channels input
- Manual / Automatic Start
- 3NO safety contacts + 1NC contact for signalling
- Suitable for use with electromecanic devices (limit switches and safety sensors) and with optical barriers

They comply with the requirements of European Directives (Low Voltage, Machines and Electromagnetic Compatibility) and are conform to European and international standards.

Description

The polymeric housing for DIN rail mounting has a degree of protection IP40 (IP20 on terminal blocks) and it has standard dimensions 22.5 x 114 mm.

Casing
- Technopolymer IP40 (IP20 on terminal blocks)
- Standard dimension 22,5 x 114 mm.

Output contacts
- 3NO safety contacts +1NC signalling contact

DIN rail mounting

Electrical connection:
- IP20 terminal blocks
- 1 or 2 x 0,75... 1,5 mm²

LED indicators for status, supply and diagnostic
- Power
- Channel 1
- Channel 2

Symbols

Example:	MS1A31	–	024
Structure:	MS1A31	–	

Tensione di alimentazione:

Safety Limit Switches with rope - Description

Applications

Easy to use, the limit switches for safety applications with rope for simple and emergency stop offer specific qualities:

- Capability for strong current switching (conventional thermal current 10 A).
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

The use of the Comepi pull wire safety switches allows you to create perimeter protections of the machines, thus reducing the need to install sever emergency stop stations in different points of the machine. They comply with the requirements of European Directives (Low Voltage and Machines Directive) and are conform to European and international standards.

Description

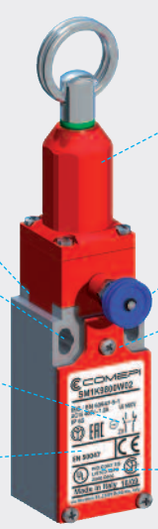
SM/SDM series are made of zinc alloy (zamack). SBM/SCM series are realized in aluminium material, therefore they are mechanically more resistant and three times lighter than the ones in zinc alloy. All metal limit switches have a degree of protection IP66.

Casing
- 30 mm. width with standardized dimensions acc. to EN 50047
- 50 mm. width
- 40 mm. width with standardized dimensions acc. to EN 50041
- 60 mm. width

Mounting the casing
- 2 x M4 screws on top part for 30 mm. width
- 2 or 4 x M4 screws on top part for 50 mm. width
- 2 or 4 x M5 screws on top part for 40 mm. width
- 2 x M5 screws on top part for 60 mm. width

Contact Block:
- Positive opening operation
- Slow action contacts
- Contacts are electrically separated

Connecting terminals:
- Block of 2 contacts: M3.5 (+, –) pozidriv 2 screw
- Block of 3 contacts: M3 (+, –) screw
- Screw head with captive cable clamp
- Markings conform with IEC 60947-1, IEC 60947-5-1 standard



Operating heads:
- Streight
- 90° right
- 90° left

Reset:
- Manual reset button for emergency stop

Cover:
- 3 screws for 30 mm. casing
- 2 screws for 40 mm. casing
- 4 screws for 50 and 60 mm. casing

Electrical connection:
- 1 x cable gland for SM/SBM series
- 3 x cable gland for SBM/SCM series

Symbols

Example:	SD	M	1	K	10	X	1	1
Structure:		M		K				

Casing width:
S = 30 mm width + 1 cable inlet
SB = 40 mm width + 1 cable inlet
SC = 60 mm width + 3 cable inlets
SD = 50 mm width + 3 cable inlets

M: Metal (SM, SDM) / Aluminium (SBM, SCM) casing

Electrical connection
1: cable inlets for PG13.5 cable gland
2: cable inlets for 1/2 NPT cable gland
3: cable inlets for PG11 cable gland (only for SM and SDM series)
4: cable inlets for M16 x 1,5 cable gland (only for SM and SDM series)
5: cable inlets for M20 x 1,5 cable gland

Operating heads:
codes 96, 9000, 9300, 9800, 9200, 97, 9100, 9500, 9900, 9400

Contact block

11: 1 NO + 1 NC contacts
02: 2 NC contacts
12P: 1 NO + 2 NC contacts
21P: 2 NO + 1 NC contacts
03P: 3 NC contacts

Only for SBM, SCM series:
12: 1 NO + 2NC contacts
21: 2 NO + 1 NC contacts
03: 3 NC contacts

W: Slow action (contact dependent)
X: Slow action non-overlapping late make

Contact blocks type X12P, X21P and W03P	
Utilization categories	A300, Q300

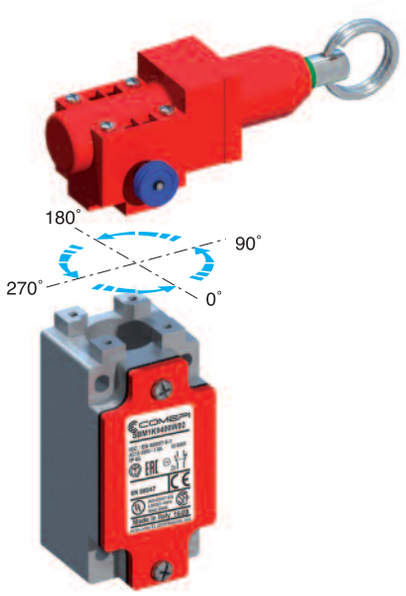
Use 60/75°C copper (Cu) conductor only. Wire rages 14-18 AWG stranded or solid. The terminal tightening torque of 7 lbs-in / 0.78 Nm. Suitable for conduit connection only with use of adapter sleeve optionally provided or recommended by the manufacturer.

For the complete list of approved products, contact our technical department

Implementation

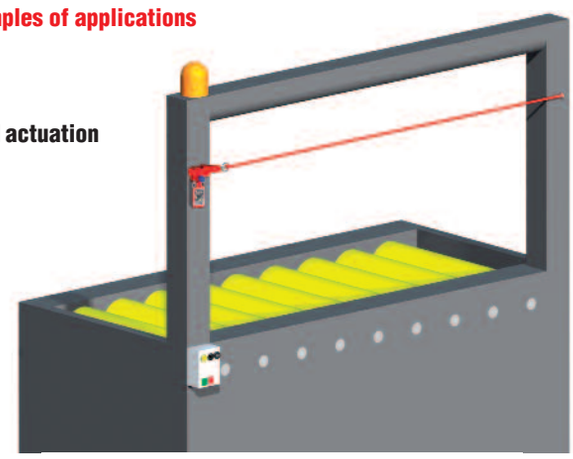
Operating head orientation

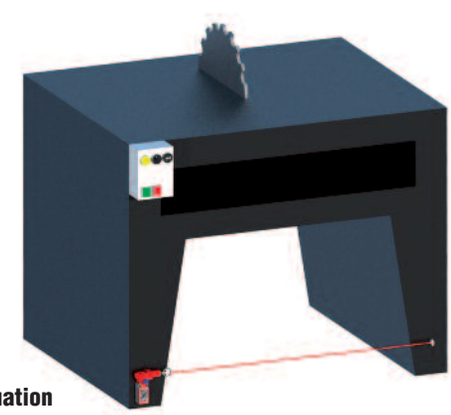
The head can be rotated each 90°.
Recommended tightening torque 0,5 Nm (max 0,8 Nm).



Examples of applications

Hand actuation





Foot actuation

Pull wire with reset for emergency stop - Metal casing - IP66

Electrical connection:
Replace the symbol "•" with the number of the thread desired
1: Cable gland PG 13.5
2: Cable gland 1/2" NPT
3: Cable gland PG 11
4: Cable gland M16 x 1,5
5: Cable gland M20 x 1,5

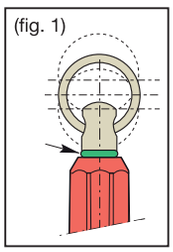
Safety Limit Switches with rope

Installation instructions

(fig. 1)



In order to obtain the correct operation of the device, please follow the following instructions.

1. Install the switch and secure the fixed end of the rope. Apply tension to the extent the green O-ring is visible and the bottom is flush with the end of the red housing. (Fig. 1).
2. Pull the reset pommel in order to close the safety contacts of the limit switch.
3. The contacts inside the limit switch will change their position whenever the rope is pulled or loose its tension.
4. Check the correct operation of the rope switch before you start the machine and periodically.

Performing the role of worker protection, improper installation or tampering with safety devices can cause serious injury to persons.

The installation must therefore be performed in accordance with local legislation and only by authorized personnel.

For any question about CE declaration of conformity or for any information and assistance, please contact our technical department

Safety Limit Switches with reset - Description

Applications

Easy to use, the limit switches for safety applications with latch and manual reset offer specific qualities:

- Visible operation (fault memorisation).
- Capability for strong current switching (conventional thermal current 10 A).
- Contact blocks with positive opening operation of the "N.C." normally closed contact(s) (symbol ⊖).
- Electrically separated contacts.
- Precision on operating positions (consistency).
- Immunity to electromagnetic disturbances.

These specific features make the limit switches ideal for detection and monitoring of faults in hoisting machines, electric lifts, freight elevators, escalators, conveyor belts, etc. They comply with the requirements of European Directives (Low Voltage and Machines Directives) and are conform to European and international standards.

Description

Limit switches with latch and manual reset are equipped with operating heads with plunger, roller plunger or roller lever, used to detect rectilinear or angular movements. AP/DP series are made of fibre-glass reinforced UL-V0 thermoplastic material, they offer double insulation ⧈ and a degree of protection IP65.
AM/DM series are made of zinc alloy (zamack) and have a degree of protection IP66. Limit switches with latch and manual reset are equipped with 1NO+1NC, 2NC, 1NO+2NC, 2NO+1NC or 3NC contact blocks with positive opening operation of the "N.C." contact(s). After actuating the control device and overshooting the latching point, the N.C. safety contact(s) remain in the open position. **Return to the initial operating state takes place by voluntary action on the reset button.**

Casing
- 30 mm. width with standardized dimensions acc. to EN 50047
- 50 mm. width with standardized dimensions

Mounting the casing
- 2 x M4 screws on top part for 30 mm. width
- 2 or 4 x M4 screws on top part for 50 mm. width

Contact Block:
- Positive opening operation
- Snap action or slow action
- Contacts are electrically separated

Connecting terminals:
- Block of 2 contacts: M3.5 (+, –) pozidriv 2 screw
- Block of 3 contacts: M3 (+, –) screw
- Screw head with captive cable clamp
- Markings conform with IEC 60947-1, IEC 60947-5-1 standard

A variety of operating heads:
- Metal plunger
- Metal plunger and nylon roller
- Nylon roller lever
- Other levers available upon request

Reset:
- Manual reset button

Cover:
- 1 or 3 screws for 30 mm. casing
- 1 or 4 screws for 50 mm. casing

Electrical connection:
- 1 x cable gland for AP and AM series
- 2 x cable gland for DP series
- 3 x cable gland for DM series

Symbols

Example:	A	P	1	R	41	Z	1	1
Structure:				R				

Casing width:
A = 30 mm width + 1 cable inlet
D = 50 mm width + 2 cable inlets (DP series)
or 3 cable inlets (DM series)

P: Plastic casing M: Metal casing

Electrical connection
1: cable inlets for PG13.5 cable gland
2: cable inlets for 1/2 NPT cable gland *
3: cable inlets for PG11 cable gland
4: cable inlets for M16 x 1,5 cable gland
5: cable inlets for M20 x 1,5 cable gland

Manual reset version

Operating heads: codes 11-13-31-32-38-41
- Other levers available upon request

Contact block

11: 1 NO + 1 NC contacts
02: 2 NC contacts
12P: 1 NO + 2 NC contacts
21P: 2 NO + 1 NC contacts
03P: 3 NC contacts

Z: Snap action
W: Slow action (contact dependent)
X: Slow action non-overlapping late make
Y: Slow action overlapping early make

* In AP... and DP... series, the 1/2" NPT thread is obtained by the use of a plastic adapter (delivered not mounted).

Technical Data

		AP / DP Series	AM / DM Series
Standards		IEC 60947-5-1 EN 60947-5-1	
Certifications - Approvals		UL - CSA - IMQ - EAC - CCC	
Air temperature near the device			
– during operation	°C	– 25 ... + 70	
– for storage	°C	– 30 ... + 80	
Mounting positions		All positions are authorised	
Protection against electrical shocks (acc. to IEC 61140)		Class II	Class I
Degree of protection (according to IEC 60529 and EN 60529)		IP 65	IP 66

Electrical Data

Rated insulation voltage U_i - according to IEC 60947-1 and EN 60947-1 - according to UL 508 and CSA C22-2 n° 14			500 V (degree of pollution 3) (400 V for contacts type Z02, X12P, X21P, W03P) A 600, Q 600 (A 300, Q 300 for AM/DM series and contacts type X12P, X21P, W03P)
Rated impulse withstand voltage U_{imp} (according to IEC 60947-1 and EN 60947-1)		kV	6
Conventional free air thermal current I_{th} (according to IEC 60947-5-1) $\theta < 40$ °C		A	10

Technical data approved by UL

Standards	Devices conform with UL 508

Contact blocks type Z11, X11, Y11, W02 and Z02

Utilization categories	A600, Q600 (A300, Q300 when installed in AM/DM series)

Contact blocks type X12P, X21P and W03P

Utilization categories	A300, Q300

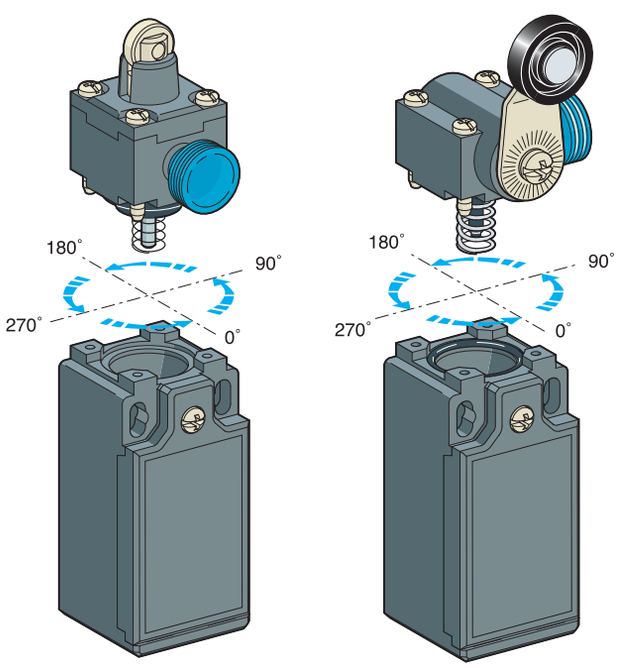
Use 60/75°C copper (Cu) conductor only. Wire rages 14-18 AWG stranded or solid. The terminal tightening torque of 7 lbs-in / 0.78 Nm. Suitable for conduit connection only with use of adapter sleeve optionally provided or recommended by the manufacturer.

For the complete list of approved products, contact our technical department

Implementation

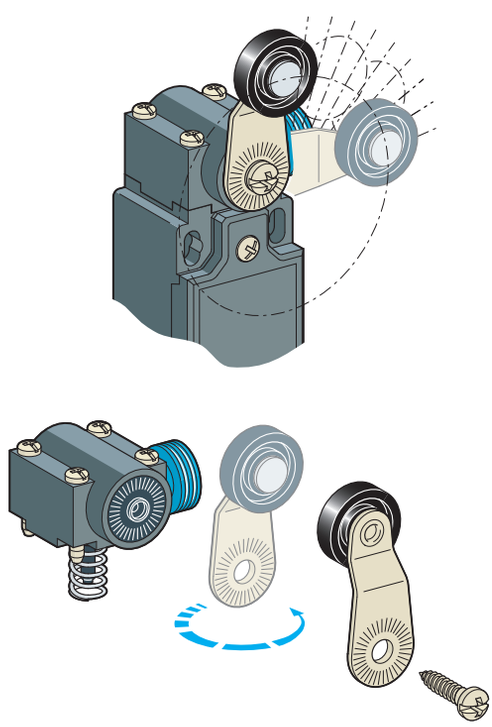
Operating head orientation

The head can be rotated each 90°.
Recommended tightening torque 0,5 Nm (max 0,8 Nm).



Lever adjustment

The lever of the head model R41 can ber adjusted every 10° and round turned in order to, obtain the maximum flexibility on the working plan
Recommended tightening torque 0,5 Nm (max 0,8 Nm).



Polymeric casing. Polymer head. 30 mm width. 1 cable inlet - IP65

Electrical connection:
Replace the symbol "•" with the number of the thread desired
1: Cable gland PG 13.5
2: Cable gland 1/2" NPT (with adapter)
3: Cable gland PG 11
4: Cable gland M16 x 1,5
5: Cable gland M20 x 1,5

General Technical Data, Specifications, Directives and Standards

The **Comepi** products listed in this catalogue are developed and manufactured according to the rules set out in IEC international publications and EN European standard.

Specifications

- **International Specifications**
  The International Electrotechnical Commission, IEC, which is part of the International Standards Organization, ISO, publishes IEC publications which act as a basis for the world market.
- **European Specifications**
  The European Committee for Electrotechnical Standardisation (CENELEC) publishes EN standards for low voltage industrial apparatus.
  These European standards differ very little from IEC international standards and use a similar numbering system. The same is true of national standards. Contradicting national standards are withdrawn.
- **Harmonised European Specifications**
  The European Committees for Standardisation (CEN and CENELEC) publish EN standards relating to safety of machinery.
- **Specifications in Canada and the USA**
  These are equivalent, but differ markedly from IEC, UTE, VDE and BS specifications.
  UL Underwriters Laboratories (USA)
  CSA Canadian Standards Association (Canada)

Remark concerning the label issued by the UL (USA). Two levels of acceptance between devices must be distinguished.

"Recognized" Authorised to be included in equipment, if the equipment in question has been entirely mounted and wired by qualified personnel. They are not valid for use as "General purpose products" as their possibilities are limited.
They bear the mark:

"Listed" Authorised to be included in equipment and for separate sale are "General purpose products" components in the USA.
They bear the mark:

European Directives

The guarantee of free movement of goods within the European Community assumes elimination of any regulatory differences between the member states. European Directives set up common rules that are included in the legislation of each state while contracditory regulations are cancelled.

There are three main directives:

- **Low Voltage Directive 2014/35/UE** concerning electrical equipment from 50 to 1000 V a.c. and from 75 to 1500 V d.c.
  This specifies that compliance with the requirements that is sets out **is acquired** once the equipment conforms to the standards harmonised at European level: EN 60947-1 and EN-60947-5-1 for **limit switches.**
- **Machines Directives - 2006/42/CE** defining main safety and health requirements concerning design and manufacture of the machines and other equipment including safety components in European Union countries.
- **Electro**

megnetic Compatibility Directive 2014/30/UE concerning all electrical devices likely to create electromagnetic disturbances.

Signification of CE marking:

CE marking must not be confused with a quality label.
CE marking placed on a product is proof of conformity with the European Devices concerning the product.
CE marking is part of an administrative procedure and guarantees free movement of the product within the European Community.

General Technical Data, Specifications, Directives and Standards

Standards

- **International Standards**

IEC 60947-1	Low-voltage switchgear and controlgear - Part 1: General Rules (CEI EN 60947-1).
IEC 60947-5-1	Low-voltage switchgear and controlgear - Part 5: Control circuit devices and switching elements - Section 1: Electromechanical control circuit devices (CEI EN 60947-5-1) - Chapter 3: Special requirements for control switches with positive opening operation.
IEC 60204-1	Electrical equipment on industrial machines - Part 1: General requirements (CEI EN 60204-1).
IEC 60204-2	Electrical equipment on industrial machines - Part 2: Item designation and examples of drawings, diagrams, tables and instructions.
IEC 60529	Degrees of protection provided by enclosure (IP code) (CEI EN 60529).

- **European Standards**

EN 50041	Low-voltage switchgear and controlgear for industrial use. Controlswitches. Position switches 42,5 x 80. Dimensions and characteristics.
EN 50047	Low-voltage switchgear and controlgear for industrial use. Control switches. Position switches 30 x 55. Dimensions and characteristics.
EN 60947-1	Low-voltage switchgear and controlgear - Part 1: General rules.
EN 60947-5-1	Low-voltage switchgear and controlgear - Part 5-1: Control circuit devices and switching elements - Electromechanical control circuit device
EN 60947-5-5	Low-voltage switchgear and controlgear - Part 5-5: Control circuit devices and switching elements - Electrical emergency stop device with mechanical latching function.

- **American Standards**

UL 508	Standard for Industrial Control Equipment
C22.2 NO. 14-13	Industrial control equipment.

- **Chinese Standards**

GB 14048.5	Low-voltage switchgear and controlgear - Part 5: Control circuit devices and switching elements.

General Technical Data, Specifications, Directives and Standards

Double Insulation ⧈

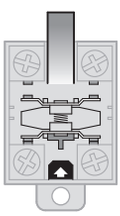
Class II materials, according to IEC 536, are designed with double insulation. This measure consists in doubling the functional insulation with an additional layer of insulation so as to eliminate the risk of electric shock and thus not having to protect elsewhere. No conductive part of "double insulated" material should be connected to a protective conductor.

Positive Opening Operation ⊖

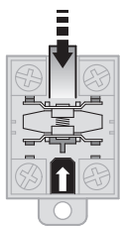
A control switch, with one or more break-contact elements, has a positive opening operation when the switch actuator ensures full contact opening of the break-contact. For the part of travel that separates the contacts, there must be a positive drive, with no resilient member (e.g. springs), between the moving contacts and the point of the actuator to which the actuating force is applied.
The positive opening operation does not deal with N.O. contacts.
Control switches with positive opening operation may be provided with either snap action or slow action contact elements. To use several contacts on the same control switch with positive opening operation, they must be electrically separated from each other, if not, only one may be used.
Every control switch with positive opening operation must be indelibly marked on the outside with the symbol: ⊖ .

Snap Action

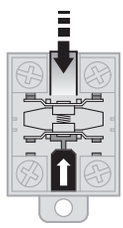
Snap action contacts are characterised by a release position that is distinct from the operating position (differential travel). Snap breaking of moving contacts is independent of the switch actuator's speed and contributes to regular electric performance even for slow switch actuator speeds.



State of rest



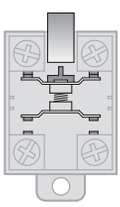
Contact change



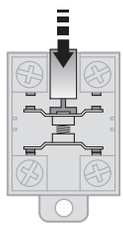
Positive opening

Slow Action

Slow action contacts are characterised by a release position that is the same as the operating position. The switch actuator's speed directly conditions the travel speed of contacts.



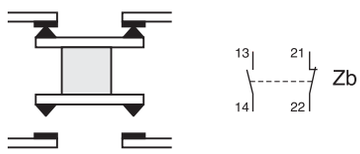
State of rest



Completely closed

Contact shape according to IEC 947-5-1.
Change-over contact elements with 4 terminals must be indelibly marked with the corresponding Za or Zb symbol as in the diagrams below.

Contacts with the same polarity



The 2 moving contacts are electrically separated

Utilization Category

AC-15: switching of electromagnetic loads of electromagnets using an alternating current (>72 VA).
DC-13: switching of electromagnets using a direct current.

Terminals

Limit switches with metal casings must have a terminal, for a protective conductor, that is placed inside the casing very close to the cable inlet and must be indelibly marked.

Minimum Actuation Force/Torque

The minimum amount of force/torque that is to be applied to the switch actuator to produce a change in contact position.

Minimum Force/Torque to achieve Positive Opening Operation

The minimum amount of force/torque that is to be applied to the switch actuator to ensure positive opening operation of the N.C. contact.

Plastic or Metal Casing - Travel and Operation Diagrams

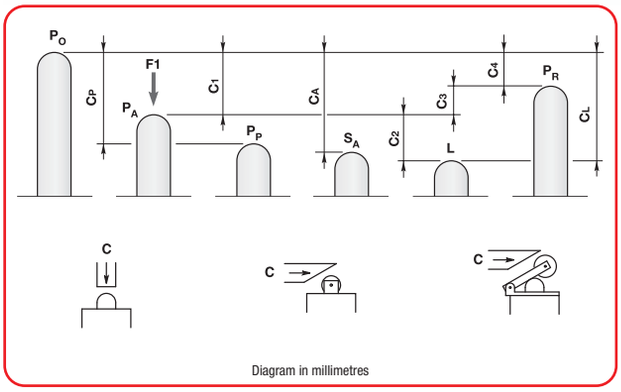


Diagram in millimetres

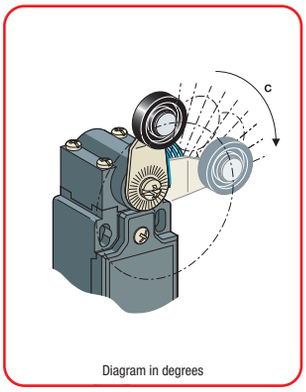

Diagram in degrees

Diagram for snap action contacts:

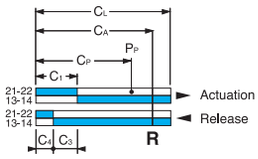

Diagram for non-overlapping slow action contacts:

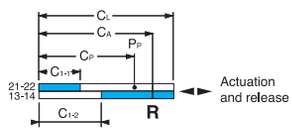

P_0 Free position: position of the switch actuator when no external force is exerted on it.
P_A Operating position: position of the switch actuator, under the effect of force F1, when the contacts leave their initial free position.
P_P Positive opening position: position of the switch actuator from which positive opening is ensured.
S_A Latching point: point of no return of the switch actuator beyond which the opened status of the NC contacts is maintained. Unlocking will only occur after deliberate action on the reset button.
L Max. travel position: maximum acceptable travel position of the switch actuator.
P_R Release position: position of the switch actuator when the contacts return to their initial free position.
C_1 Pre-travel: distance between the free position P_0 and the operating position P_A.

C_P Positive opening travel: minimum travel of the switch actuator, from the free position, to ensure positive opening operation of the normally closed contact.
C_A Latching travel: distance between the free positions P_0 and the latching point S_A.
C_2 Over-travel: distance between the operating position P_A and the max. travel position L.
C_L Max. travel: distance between the free position P_0 and the max. travel position L.
C_3 Differential travel (C1-C4): travel difference of the switch actuator between the operating position P_A and the release position P_R.
C_4 Release travel: distance between the release position P_R and the free position P_0.

Note: for slow action contacts, $C_3 = 0$, C_{1-1} = pre-travel of contact 21-22, C_{1-2} = pre-travel of contact 13-14
